Success criteria:

- Build a floating oil spill cleaner upper boat drone that starts with a button press
- The product should be able to autonomously navigate over an area
- The product should be made to clean up an oil spill by dragging a 'smart material'

Additional considerations:

Materials:

Features

Essentials:

Nice to have:

Input process output:

Team name and branding/logo:

How will we attach the motors to the boat?

Sketch of the boat drone:

How will the boat drone move about on the water?

How could it be better?
